

# Smart Sync

Access to everything, exactly where you need it.

Smart Sync is a better way to access all your work. Now, every file in your Dropbox, and every folder that's been shared with you, is accessible right from your desktop. Files take up virtually no space on your hard drive until you need them, and when you open them, they'll sync automatically. Smart Sync works on Mac and PC, even if you're not on the latest version, so everyone can share and access the work they need.

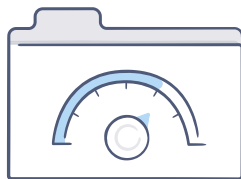

## See all your work

Now, you can see all the files and folders you have access to in Dropbox right from your desktop - even if you have more in the cloud than you could fit on your hard drive. See, and even preview your files, without having to switch to a web browser.

## Access to everything

Your files and folders are just a click away. Accessing a file is as simple as opening it, and it syncs to your hard drive automatically. Organize all your files and folders in Dropbox at any time, whether they are synced locally or in the cloud.

## Space to work

Freeing up hard disk space is easy too. Send files and folders to the cloud with just a click, and you'll still see them on your desktop.

## Right where you work

Smart Sync works seamlessly across platforms on Windows and Mac. And, you don't have to be using the latest version of the operating system.
